PHYSICS

SECTION - A

Multiple Choice Questions: This section contains 20 multiple choice questions. Each question has 4 choices (1), (2), (3) and (4), out of which **ONLY ONE** is correct.

Choose the correct answer:

1. Find dimensions of $\sqrt{\frac{Gh}{c^5}}$

- (1) $M L^2 T^{-1}$ (2) $M^0 L^0 T^1$
(3) $M O L T^{-1}$ (4) $M^0 L^0 T^{-1}$

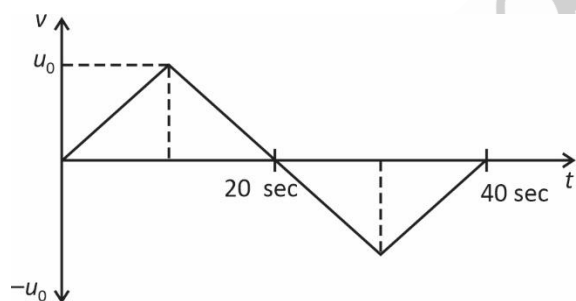

Answer (2)

Sol. $\sqrt{\frac{Gh}{c^5}}$

$$\Rightarrow M^0 L^{-1} L^1 T^1$$

$$M^0 L^0 T^1$$

2. Velocity v /s time graph of a particle is as shown in the figure below:

Find magnitude of acceleration of the particle at $t = 10$ sec.

- (1) $\frac{u_0}{10}$ (2) $\frac{u_0}{20}$
(3) $\frac{u_0}{5}$ (4) $\frac{u_0}{4}$

Answer (1)

Sol. $|\vec{a}| = \left(\frac{u_0}{10}\right)$

3. 8 Hg drops coalesce to form a new drop. Ratio of final surface energy of single drop to total surface energy of 8 drops is

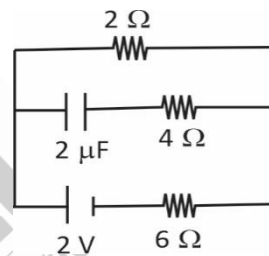

- (1) $\frac{1}{4}$ (2) $\frac{1}{8}$
(3) $\frac{1}{2}$ (4) 1

Answer (3)

Sol. $8 \frac{4}{3} \pi r^3 = \frac{4}{3} \pi R^3, R = 2r$

$$\text{Ratio} = \frac{S \times 4\pi(R)^2}{8 \times S \times 4\pi(r)^2} = \frac{1}{8} \times 4 = \frac{1}{2}$$

4. In circuit below, find voltage across capacitor in steady state

- (1) 1 V (2) 0.5 V
(3) $\frac{3}{2}$ V (4) 4 V

Answer (2)

Sol. $V_C = \frac{2 \times 2}{8} = 0.5 \text{ V}$

5. A particle of mass m moves from height $2R$ above earth surface to surface of earth. Find change in P.E. (R is radius of earth)

- (1) $\frac{-2 GMm}{3 R}$ (2) $\frac{-GMm}{3R}$
(3) $\frac{-GMm}{R}$ (4) $\frac{GMm}{4R}$

Answer (1)

Sol. $\Delta U = \frac{-GMm}{R} + \frac{GMm}{3R}$
 $\Rightarrow \frac{-2GMm}{3R}$

6. Magnetic field $B = (2t^2 + 2t + 4)$ T is passing perpendicularly through a coil of radius $r = 20$ cm. Resistance of the coil is $R = 10 \Omega$. Find current through the coil at $t = 3$ sec.

- (1) $I = 8\pi \times 10^{-2}$ A (2) $I = 3.2\pi \times 10^{-2}$ A
 (3) $I = 7.2\pi \times 10^{-2}$ A (4) $I = 5.6\pi \times 10^{-2}$ A

Answer (4)

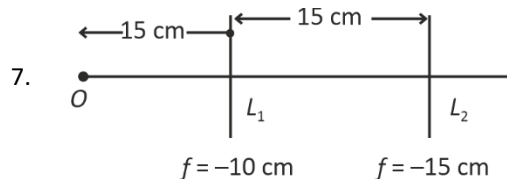

Sol. $\phi = \int B \cdot ds = (2t^2 + 2t + 4)\pi r^2$

$$\varepsilon = \left| \frac{d\phi}{dt} \right| = \pi r^2 (4t + 2)$$

So $\varepsilon = \pi(14)(4 \times 10^{-2})$

So $I = \left(\frac{\varepsilon}{R} \right) = \frac{14\pi \times 4 \times 10^{-2}}{10}$

$\Rightarrow I = 5.6\pi \times 10^{-2}$ A

Two concave lens are placed at separation of 15 cm, find final image of object O .

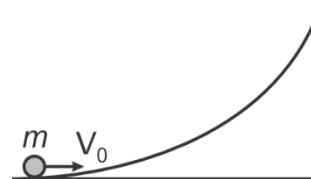

- (1) $\frac{35}{2}$ cm from L_2 & virtual
 (2) $\frac{17}{2}$ cm from L_1 & real
 (3) $\frac{35}{4}$ cm from L_2 & virtual
 (4) $\frac{17}{2}$ cm from L_2 & real

Answer (3)

Sol. $v = \frac{uf}{u+f} = \frac{-15 \times -10}{-15-10} = \frac{-150}{-25} = -6$

$$v = \frac{-21 \times -15}{-21-15} = \frac{15 \times 21}{36} = \frac{35}{4}$$

8. Which of the following objects given in options can reach maximum height in situation shown in figure below :
 (given that there is no slipping)

- (1) Solid cylinder (2) Solid sphere
 (3) Disc (4) Ring

Answer (4)

Sol. Ring because its KE is maximum for some mass & speed.

9. An ideal gas undergoes process whose equation is $PT^3 = \text{constant}$. What would be polytropic constant for this

- (1) $\frac{1}{2}$ (2) $\frac{3}{4}$
 (3) $\frac{2}{3}$ (4) 0.4

Answer (2)

Sol. $PT^3 = \text{constant}$

And $PV = nRT$

$\therefore P(PV)^3 = \text{Constant}$

$\Rightarrow P^4 V^3 = \text{Constant}$

$\Rightarrow PV^{3/4} = \text{Constant}$

$\therefore \frac{3}{4}$ will be answer

10. **Assertion (A):** EM wave exert pressure on surface on which it falls.

Reason (R): Rest mass of photons is zero.

- (1) Both A & R are correct & R is correct explanation of A
 (2) Both A & R are correct but R is not correct explanation of A
 (3) A is correct but R is false
 (4) A is false but R is correct

Answer (2)

Sol. Both are true but R is not correct explanation of A.

11. An electron is moving with speed $0.8c$ in a medium. de-Broglie wavelength of electron in medium is (c is speed of light)

- (1) $1.54 \times 10^{-15} \text{ m}$
(2) $3 \times 10^{-12} \text{ m}$
(3) $2.34 \times 10^{-27} \text{ m}$
(4) $3.5 \times 10^{-15} \text{ m}$

Answer (2)

Sol. $\lambda = \frac{h}{mv}$

$$= \frac{20}{3} \times \frac{10^{-34}}{9.1 \times 10^{-31} \times 0.8 \times 3 \times 10^8}$$

$$= \frac{20}{7.2 \times 9.1} \times 10^{-11} = 0.3 \times 10^{-11}$$

12. If velocity of a particle is decreased by 20% then new de-Broglie wavelength is $\alpha \lambda_0$, where λ_0 is initial wavelength. Find the value of α .

- (1) $\alpha = 1.50$
(2) $\alpha = 0.5$
(3) $\alpha = 1.25$
(4) $\alpha = 0.75$

Answer (3)

Sol. Initially $P_0 = mv_0$

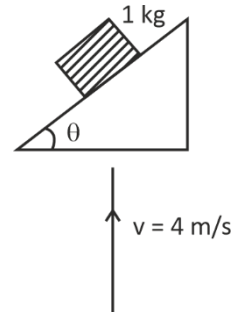

So $\lambda_0 = \frac{h}{mv_0}$

Now, $p = mv_0 \frac{8}{10}$

So, $\lambda = \frac{h \times 10}{mv_0 \times 8} = \frac{\lambda_0 \times 10}{8}$

$\Rightarrow \lambda = 1.25 \lambda_0$

13. A block of mass 1 kg rests on an inclined plane. If whole system is moving with velocity 4 m/s (upward). Calculate the work done by friction in $t = 2 \text{ sec}$.

- (1) $\Delta w = 40 \sin 2\theta$ (2) $\Delta w = 80 \sin^2 \theta$
(3) $\Delta w = 80 \sin^2 \theta$ (4) $\Delta w = 40 \sin^2 \theta$

Answer (2)

Sol. $f = mg \sin \theta$

And $Ar - V \in = 4 \times 2 = 8 \text{ m}$

So $A = \vec{f} \cdot \vec{\Delta r}$

$\Rightarrow \Delta w = (mg \sin \theta) \times 8 \times \sin \theta$

$\Rightarrow \Delta w = 8 mg \sin^2 \theta = 80 \sin^2 \theta$

14. A uniformly angular accelerated wheel rotates θ_1 in first 2 seconds and θ_2 in next 2 seconds. Initial angular speed is zero then $\frac{\theta_2}{\theta_1}$

- (1) 4 (2) 3
(3) 5 (4) 6

Answer (2)

Sol. $\theta = \frac{1}{2} \alpha t^2$

$\frac{\theta_2}{\theta_1} = \frac{4^2 - 2^2}{2^2 - 0^2} = \frac{16 - 4}{4} = 3$

15. If a cell is connected to $20\ \Omega$ resistance then current is circuit is 0.25A. But if resistance of $2\ \Omega$ is connected across the cell then current is 2 A. Find internal resistance of the cell.

- (1) $\frac{4}{7}\ \Omega$ (2) $\frac{2}{3}\ \Omega$
 (3) $1\ \Omega$ (4) $2\ \Omega$

Answer (1)

Sol. $E = \frac{1}{4}r + \frac{1}{4} \times 20$

$$E = \frac{r}{4} + 5$$

And $E = 2r + 2 \times 2$

$$\Rightarrow E = 2r + 4$$

$$\therefore E = \frac{r}{4} + 5 = 2r + 4$$

$$\Rightarrow 1 = \frac{7r}{4}$$

$$\therefore r = \frac{4}{7}\ \Omega$$

16. Consider ${}_{6}\text{C}^{12}$ Nuclei

Given $m_p = 1.007276\ \text{amu}$; $m_n = 1.008664\ \text{amu}$. Find binding energy for nucleon.

(in MeV/nucleon)

- (1) 7.42 (2) 10.4
 (3) 2.20 (4) 12.3

Answer (1)

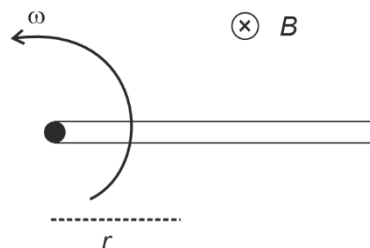

Sol. $\Delta m = [(6 \times 1.007276) + (6 \times 1.008664) - 12]\ \text{amu}$.

$$\Delta m = 0.09564\ \text{amu}$$

$$BE = (0.09564 \times 931.5)\ \text{MeV} = 89.08866\ \text{MeV}$$

$$\text{So } \frac{BE}{12} = 7.42\ \text{MeV/Nucleon}$$

17. Spatial magnetic field is given as $B = B_0 e^{-\lambda r}$ where r is distance from hinged end of the rod of length ℓ . Emf induced across ends of rod for angular velocity of ω is

- (1) $B_0 \omega \left(\frac{1}{\lambda^2} - \frac{e^{-\lambda \ell}}{\lambda^2} \right)$
 (2) $B_0 \omega \left(\frac{e^{-\lambda \ell}}{\lambda^2} + \frac{\ell}{\lambda} e^{-\lambda \ell} \right)$
 (3) $\epsilon = B_0 \omega \left\{ \frac{1}{\lambda^2} - \frac{e^{-\lambda \ell}}{\lambda^2} - \frac{\ell}{\lambda} e^{-\lambda \ell} \right\}$
 (4) $B_0 \omega \left(\frac{e^{-\lambda \ell}}{\lambda} \right)$

Answer (3)

Sol. $d\epsilon = \int B dl = \int_0^\ell B_0 e^{-\lambda r} dr \omega$

$$= B_0 \omega \left\{ \frac{r e^{-\lambda r}}{-\lambda} \right\}_0^\ell - \left\{ \frac{e^{-\lambda r}}{\lambda^2} \right\}_0^\ell$$

$$= \left[B_0 \omega \left\{ \frac{\ell e^{-\lambda \ell}}{-\lambda} \right\} - \frac{1}{\lambda^2} \{ e^{-\lambda \ell} - 1 \} \right]$$

$$\epsilon = B_0 \omega \left\{ \frac{1}{\lambda^2} - \frac{e^{-\lambda \ell}}{\lambda^2} - \frac{\ell}{\lambda} e^{-\lambda \ell} \right\}$$

18. Two thin lenses are placed in contact in air. Then combination behaves as – (if)

- (A) $|f_{\text{concave}}| > |f_{\text{convex}}|$ then combination acts as concave
 (B) $|f_{\text{convex}}| > |f_{\text{concave}}|$ then combination acts as concave lens
 (C) $|f_{\text{convex}}| = |f_{\text{concave}}|$ then combination acts as concave lens
 (D) $|f_{\text{convex}}| = |f_{\text{concave}}|$ then combination acts as convex lens

- (1) (A) (2) (B)
(3) (C) (4) (D)

Answer (2)

Sol. $P = P_1 + P_2$

If power of convex lens is larger then total power will be +ve and effectively the combination will be have like convex lens.

So for it $|f_{\text{convex}}| > |f_{\text{concave}}|$

Or $|f_{\text{convex}}| < |f_{\text{concave}}|$

And vise-versa

19. A particle is projected with velocity $\frac{v_0}{\sqrt{2}}(\hat{i} + \hat{j})$ from origin.

Electric field $\vec{E}$ and magnetic field $\vec{B}$ are present in space as $\vec{B} = B_0 \hat{k}$ and $\vec{E} = E_0 e^{-\lambda x} \hat{i}$. Speed of particle at $x = L$ is (m and q are mass and charge of particle)

- (1) v_0
(2) $\sqrt{2}v_0 + e^{-\lambda L} \frac{qE_0}{\lambda m}$
(3) $\sqrt{v_0^2 + \frac{2qE_0}{\lambda m}(1 - e^{-\lambda L})}$
(4) $\sqrt{v_0^2 + \frac{qE_0}{\lambda m}e^{-\lambda L}}$

Answer (3)

Sol. $\int_0^L qE_0 e^{-\lambda x} dx = \frac{qE_0 e^{-\lambda x}}{(-\lambda)} \Big|_0^L$

$$\frac{1}{2}mv^2 = \frac{1}{2}mv_0^2 + w = \frac{qE_0}{\lambda}(1 - e^{-\lambda L}) + \frac{1}{2}mv_0^2$$

20.

SECTION - B

Numerical Value Type Questions: This section contains 5 Numerical based questions. The answer to each question should be rounded-off to the nearest integer.

21. Escape velocity on earth is $v_e = \sqrt{2gR}$. A planet of half the radius of earth with density equal to that of earth, the escape speed shall be $\frac{v_e}{N}$ then N is

Answer (2)

Sol. $V_e = \sqrt{\frac{2G\rho \frac{4}{3}\pi R^3}{R^2}} R \propto \sqrt{\rho R^2}$

$$V_e^1 = \sqrt{\rho \left(\frac{R}{2}\right)^2} \frac{V_e}{V_{e'}} = 2$$

22. A series RLC circuit is in resonance. It is given that $L = 1.6$ H and $C = 40 \mu\text{F}$. Then find value of inductive reactance (in SI unit)

Answer (200)

Sol. $\frac{1}{\sqrt{LC}}$

$$\Rightarrow \frac{1}{\sqrt{1.6 \times 40 \times 10^{-6}}} = \frac{10^3}{8}$$

$$\therefore X_L = \omega L = \frac{10^3}{8} \times 1.6 = 200 \Omega$$
